

# **Internship Design Proposal**

**Submitted By**

**Student Name: Maheen Tokir**

**Registration No: FA23-BCS-041**

**Program: BS Computer Science (6th Semester)**

**Section: BCS-6C**

**Submission Date: 27 January 2026**

**COMSATS University Islamabad  
Abbottabad Campus**

## 1. Organization Overview & Role

Askari Bank Limited is a leading commercial bank in Pakistan, established in 1991 and operating under the Fauji Foundation through Fauji Fertilizer Company. The bank provides a wide range of financial services to individuals and businesses, including conventional and Islamic banking, deposit accounts, loans, cards, foreign currency services, and digital banking facilities. These services are delivered through branches, ATMs, online platforms, and mobile applications.

### **Department**

The internship is conducted in the IT Hub, which manages centralized IT infrastructure, servers, domain-based networks, cybersecurity, and user support operations. The department oversees hardware and software deployment, network administration, access control via Active Directory, backup verification, and cybersecurity monitoring, ensuring secure and efficient IT operations across all branches.

### **Role**

During the internship, I will actively participate in configuring and managing IT systems, deploying and maintaining devices, administering network resources, handling data operations, and supporting cybersecurity initiatives. My tasks include assisting with hardware and software troubleshooting, verifying data backups, performing system preparation, monitoring branch network connectivity, and supporting patch deployment. Additionally, I will contribute to IT projects such as **Excel-based infrastructure monitoring** and access control management, which help strengthen both operational efficiency and cybersecurity posture, while providing practical experience in enterprise IT administration.

## Scope of Work

- Develop understanding of **enterprise banking IT infrastructure**, including networks, servers, and domain-based systems.
- Assist in **system administration and access control** in accordance with banking security and compliance standards.
- Support **network operations and internal banking software systems** to maintain service continuity.
- Gain exposure to **data security practices, backup procedures, system log monitoring, IT governance, cyber security, and regulatory frameworks** in financial institutions.

### **1.1 Key Activities (Check all that apply)**

- ☐ Coding
- ☒ Testing
- ☒ Documentation
- ☐ Data Analysis
- ☐ Research
- ☒ Technical Support

- ☐ Database Management
- Others: Frontend Website Development

### Tools / Technologies to be used

- Microsoft Excel – formulas, Pivot Tables, conditional formatting, dashboards
- Active Directory – user and permission management
- Domain-based network administration tools
- Backup verification utilities
- HTML, CSS, JavaScript – front-end website development
- Microsoft Outlook – email setup and configuration
- Cybersecurity monitoring concepts – role-based access and access control
- Web browsers (for bookmark export/import and testing access)

### 1.2 Expected Deliverables

- Participation in **IT support and system administration activities**, including device preparation, Outlook configuration, troubleshooting assistance, and monitoring of domain-based network operations.
- Documentation of internship tasks, operational procedures, and weekly progress reports in accordance with organizational and academic requirements.
- Exposure report describing **enterprise IT infrastructure, cybersecurity practices, backup verification processes, and network management workflows** within a banking environment.
- Development of a **frontend user interface prototype** inspired by Askari Bank's digital platform, including an initial basic UI followed by an upgraded version with improved responsiveness, layout structure, and user experience.
- Preparation of a **Software Requirements Specification (SRS) document** defining system objectives, functional and non-functional requirements, user roles, and workflow design for the developed frontend system.
- Implementation and demonstration of a **Role-Based Access Control (RBAC) project** related to cybersecurity concepts, illustrating secure user authentication, authorization levels, and controlled access management.
- Final internship report summarizing learning outcomes, technical skills gained, and practical application of academic knowledge in a real-world enterprise setting.
